

# R315 Multi-Sense Series

Can be applied with more flexibility  
The following are examples for your reference

## Main Product Configurations

+

## External Sensor

# Scenario : Restroom / Toilet

**R31532**

- Temperature
- Humidity
- Water Leak \* 2
- Push Button

**R31555**

- PIR
- Push Button
- Reed Switch \* 2
- Glass Break

**R31569**

- Temperature
- Humidity
- Push Button
- Reed Switch \* 2
- Glass Break

## Examples

### Temperature and Humidity

Detect the exhaust fan and the ventilation system are operating or not based on the temperature and humidity of the environment.

### Push Button:

It is used as an emergency button. If someone needs help when he falls in the restroom, he can press the button and the emergency notification will be reported urgently.

### PIR:

Detect whether someone is using the toilet or not.

### Water Leak:

Detect whether there is a water leak from the pipe under the toilet or not.

### Reed Switch:

Detect whether the door & window are closed or not when going outside.

### Glass Break:

Detect whether the window is broken from the outside.

# Scenario : Greenhouse

## R31521

- Temperature
- Humidity
- Water Leak \* 2
- Light Sensor
- Digital Output

## R31525

- Temperature
- Humidity Sensor
- Light Sensor
- Vibration Sensor
- PIR
- Water Leak

## Examples

### Temperature and Humidity :

Detect whether the sprinkler system, heater, etc. are operating or not based on temperature and humidity in order to ensure constant temperature and humidity.

### Water Leak:

Detect whether the drainage facilities are plugged up or overflowed.

### PIR:

Detect people come in/get out.

### Light Sensor:

Detect whether the light in each area of the greenhouse is sufficient or not in order to decide if the plant light is needed.

### Vibration Sensor:

Can be installed on the scaffolding or other devices to detect whether they are toppled over or not.

### Digital Output:

Can be installed on other green house equipment.

# Scenario : Wine cellar / Warehouse

## R31526

- Temperature
- Humidity
- Water Leak \* 2
- Vibration
- Digital Output

## R31559

- Vibration
- Water Leak \* 2
- Push Button
- Digital Output

## R31589

- Temperature
- Humidity
- Water Leak \* 2

## Examples

### Temperature and Humidity :

Adjust the suitable environment based on temperature and humidity.

### Water Leak:

Detect if there are water leaks or not.

### Push Button:

If someone is locked inside the door or is in emergency situations, he can ask for help.

### Light Sensor:

Record the lighting in the wine cellar to avoid the wine oxidation.

### Vibration Sensor:

Can be installed on the shelves or liquor cabinets to detect whether there is a vibration.

### Digital Output:

Connect the external device with an emergency button to alarm with flashing light, siren, etc.

# Scenario : Storage of valuables

## R31527

- Temperature
- Humidity
- Vibration
- Reed Switch \* 2
- Glass Break

## R31597

- Temperature
- Humidity
- PIR
- Reed Switch
- Glass Break \* 2

## R315102

- Vibration
- PIR
- Reed Switch
- Glass Break \* 2

## Examples

### Temperature and Humidity :

Adjust the suitable environment based on temperature and humidity

### Vibration Sensor:

Can be installed on the display cases or safe deposit boxes to detect whether there is a vibration

### Reed Switch:

Can be installed on the display cases or safe deposit boxes to detect whether they are open

### Glass Break:

Can be installed on the glass showcase to detect whether it is broken

### PIR:

Detect whether there are human beings in the secured area of valuables

# Scenario : Home / Living room

## R31564

- Vibration
- Water Leak \* 2
- Light Sensor
- Digital Output

## R31578

- Temperature
- Humidity
- PIR
- Reed Switch \* 2
- Glass Break

## R315103

- Vibration
- Push Button
- PIR
- Digital Output

## Examples

### Temperature and Humidity :

Adjust the air conditioner, dehumidifier, humidifier, etc., based on temperature and humidity.

### Vibration Sensor:

Can be installed on cabinets or safe deposit boxes.

### Light Sensor:

Detect the light is on or not based on the illuminance.

### Reed Switch:

Can be installed on the front door, garage, or storeroom to make sure whether they are closed or not.

### Glass Break:

Can be installed on the glass window to detect if it is broken.

### PIR:

Detect if there are people at home when going outside.

### Push Button:

Can serve as the door bell or call bell ( It has to be used with Digital Output devices.)

### Digital Output:

Connect the external device with an emergency button to alarm with flashing light, siren, etc.
