M2 Lite IoT Data Engine

M2 Lite IoT Data Engine?

- M2 Lite IoT Data Engine is a cloud service that allows you to be an IoT service provider.

- Install it on your PC and check devices and gateways on your phone wherever you are, whenever you need. No need to spend a fortune to own a cloud service. Click to get a lite data engine to secure all your data. Even in small places, you can get a complete experience of cloud service with no difference from other data engine users.

Please refer to **Netvox M2 IoT Total Solution** for more detailed information.

⚙ Lite. But Powerful.

A cost-cutting way to get your own cloud service. No need to spend a great deal of money, you can also have your private cloud by just a few clicks. Installed in your computer, the M2 Lite data engine brings you a lite but comprehensive cloud service.

☝ One-Click Installation.

Easy and quick setup.
Insert the USB dongle to get Netvox M2 lite data engine service. Want to receive immediate messages and get full control of IoT devices? With a few clicks, all you need is already on your computer.

☁ Data Security. Keep Everything Private.

Worry about your data being leaked or seen by someone else?
The M2 Lite data engine makes you an IoT service provider with strong protection of data. All your information will be secured by direct transmission to your cloud server without passing through Netvox cloud.

🏠 Limited Space. Limitless Strength.

Need an IoT data engine for stores, factories, or even malls?
M2 Lite Data Engine is the best business partner for small places. Even in a limited space, the M2 Lite brings you a more convenient and efficient way to manage IoT devices and gateways.
